```
The present invention provides the protein and coding sequences of canine pro-endostatin and endostatin. The sequences can be used in the treatment and diagnosis of angiogenesis related disorders, including cancer, rheumatoid arthritis, psoriasis, retinopathy, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis, osler-webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, necessal anteriorence maniformations, ischaemic limb angiogenesis, diabetic neovascularisation, and fractures. The present sequence is the canine pro-endostatin coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome). inflammatory conditions (e.g., mastitis, cophoritis and vaginitis), immune disorders (e.g., congenital and acquired communities, autolimmune cophoritis, systemic lupus erythematosus), cardiovaecular disorders, blood related disorders (e.g., anaemia), cardiovaecular disorders, respiratory disorders, neurological disorders gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and polymucleotides may also be used in screening for compounds which modulate ovarian autigen expression or activity. The polymucleotides may further be used for gene therapy, chromosome mapping, in the contribution of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease disgnosis, drug targeting and phenotyping. The present sequence represents cDNA encoding a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2386 CCCTGGCGGGCAGATGACATCCTGGCCAGCCCCCTCGCCTGCCCGAGCCCCAGCCCTAC 2445
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2501

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel viral gene therapy vector comprising a nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or muthe endostatin and angiogenesis-inhibiting fusions and fragments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenis in the vicinity of the retina. The vector is administered to cells ex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              'n

It was isolated from a placental cDNA library using a probe based on an unidentified collagenous protein and a probe based on mouse alpha-1 cDNA clone mol9. A claimed plasmid comprising alpha-1 collagen nucleic acid and an expression control sequence can be used to express recombinant collagen in prokaryotic or eukaryotic (sepecially mammalian) host cells. The collagen may be used to treat a patient suffering from a disease associated with degradation of cartilage, and for supplementing collagen 1 CCCTGGCGGCCAGATGACATCCTGGCCGGCCCCCCGCGCCCTGCTGGACCCCCAGCCCTAC 181 CTGAACAGCCCGCAGCCGGGCGGCATGCGAGGCATCCGGGGAGCGGACTTCCAGTGCTTC CAGGACCTCTACAGCATCGTGCGCCGCGCGACCGCACCGGGGTGCCCGGTCGTAACCTC Match 59.9%; Score 496.8; DB 2; Length 3394; Local Similarity 77.1%; Pred. The method comprises identifying a compound having atomic coordinates with non-trivial similarity to selected coordinates of atoms of a mammalian endostatin involves (a) providing a library of atomic coordinates of compounds in a library of candidate compounds, (b) Alphal(XVIII) collagen; mimetic; endostatin; atomic coordinate; library; anti-anglogenic; heparin binding domain; receptor binding domain; mimic; alpha-helix A domain; carbohydrate recognition domain; CRD domain; treatment; angiogenesis; tumour; human; se. 601 GGCAGGCTGCTGGAGCAGGAGGCGGAGCTGCCGCCACGCCTTCGTGGTGCTCTGCATC 661 GAGAACAGCGTCATGACCTCCTTCTCCCAAGTAGGGCCGCGGGGGCCCAGGGACAGGGGGG 757 -- GGGCCTGGCCGGGACGCTTGCCTGCACGG-TCACGTTTAATGTAATCCTCAAGAAATA /product= "alpha1(XVIII) collagen" /note= "Partial sequence, no start codon given" Olsen BR, Hohenester E, Timpl R, Sasaki T; Identifying mimetics of mammalian endostatin. comparing the library of atomic coordinates to the selected coordinates of a mammalian endostatin and (c) selecting from the library at least one candidate compound on the basis of selecting criteria which include similarities between the atomic coordinates of the selected candidate compound and the atomic coordinates of the mammalian endostatin. The invention also describes the use of an anti-anglogenic fragment of endostatin comprising a domain selected from a heparin binding domain, a receptor binding domain, and exposed on alpha helix A domain, and a reabolydrate recognition domain (CRD) domain. The methods can be used for designing and selecting endostatin minics. The compounds identified can be used for treating undesired anglogenesis, e.g. tumours. This sequence encodes human alphal (XVIII) collagen which is used in the description of

The present invention relates to a new method of producing a protein, such as functional protein domain, that is either C or N-terminus of the primary translational product (PTP) of a gene, where the protein has biological activity which is distinct from PTP. The method of the invention involves growing a host cell transfected with a DNA construct comprising a regulatory DNA and a DNA targeting segment. This method is useful for producing a functional protein domain of proteins such as regulatory blood products and monoclonal antibodies. The method described in the invention allows controlled and precise modification of the host cell genome in order to produce functional protein domain (FPD) of the host cell genome is equence to be integrated in the host cell genome or coling sequence, the original coding sequence present in the host cell genome translet is used. Use of the host cell senon encoding FPD also provides the advantages of both eliminating any use of the same post-transcriptional (e.g., splicing) and/or post-translational (e.g. glycosylation, phosphorylation) processes that are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Producing functional protein domain by growing host cell transfected with DNA construct having regulatory DNA and DNA targeting segment, and optionally culturing homologously recombinant cell and collecting

                                                                                                                                                                                          120
actually applied in vivo for the maturation of FPD. The use of a single regulatory unit eliminates the necessity of manipulating the complementary DNA coding for the PTP to isolate the segment coding for the PPD; and adapt it to the expression vector. The present nucleic acid sequence encodes the plasmid pEnd-HR#1 FPD fusion protein of the invention. The FPD fusion protein contains the mouse Ig signal peptide (mIgSP) sequence fused to exons 38-41 of the human COLIBAl sequence
                                                                                                                                                  9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   comprising a DNA encoding an anti-angiogenic protein, which shows therapeutic effects on rheumatoid arthritis. The composition is useful for treating rheumatoid arthritis and the gene therapy is effective, lasting for 14 days. The present sequence is the coding sequence for human collagen XVII. Endostatin, which consists of the C-terminal 183 residues of collagen XVIII, was used as an anti-angiogenic protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COCGRECACACCCACACCCACCAGGACTTCCAGCTGGTGCTGCTGGTGGTGGTGGT

cells expressing the polypeptide are useful in treating pancreatic cancer and stimulating an immune response. The polymuclectides can be used as probes or primers for nucleic acid hybridisation, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in the timour cells, in vaccines and for gene therapy. Note: The sequence date for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a fusion protein of vaa and endostatin. The specification describes a method for the production of soluble, recombinant human endostatin in Streptomyces. Leader sequences of streptomyces sp. strain CS SnpA and S. venezuelae alpha-amylase proteins are linked to the N-terminal of endostatin. This ensures that endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation broth and is produced in large quantities. The method is used for preparing soluble recombinant human, murine or primate endostatin, which is useful in the treatment of cancer, inhibition of tumour growth, inhibition of angiogenesis, isolation of receptors for endostatin and for identification of anti-angiogenic compounds in assays. The endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation broth and is produced in large quantities. Streptomycetes are amenable for cultivation in large fermentations allowing for large quantities of soluble endostatin to be produced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

This invention describes a novel method for the preparation of recombinant human vascular endothelial cytopoiesis inhibiting factor with human igGIFC fragment molecular structure and its product application. The novel factor is derived from endostatin (using PCR to screen a human foetal kidney cell cDNA library) and human IgGIFC. The product of the invention can specifically inhibit tumour vascular endothelial prolification and can be used for curing several tumour types. This sequence encodes a fusion construct composed of human endostatin and human IgGIFC, described in the disclosure of the invention

```
A cDNA clone (AAT84485) codes for a mouse novel type alpha-1 (XVIII) collagen (AAW26328) that is expressed in multiple organs, especially the liver, lung and kidney. It was isolated by screening murine 15.5- and 17.5-day embryo libraries with probes based on murine type XII collagen and on human alpha-1 collagen cDNA. Isolated nucleic acids can be used to express recombinant alpha-1 collagen in transformed host cells. Claimed nucleic acid (see AAT84484) coding for human alpha-1 collagen (AAW26327) can be used to treat patients suffering from diseases associated with degradation of cartilage, and for supplementing collagen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3184 CCCTGGCGAGCAGATGACATCCTGGCCAACCCACCGCGCCTGCCAGACCGCCAGCCTTAC 3243

The present sequence encodes a human polypeptide which is a potent anglogenessis inhibitor, designated KED. The KED polypeptide, Kringle proteins, or a kringle derived from human tissue plasminogen activator (tPA) protein are used to inhibit anglogenesis. Kringle protein, KED or the pare useful for treating tumours, as well as atherosclerosis, arthritis, retinopathy and other similar diseases. KED is also useful for the treatment of diseases such as bronchial vascular congestion, the treatment of disease, adult respiratory distress syndrome, castleman's disease, psoriasis, hepatitis, aneurysm, renal disease and haemangioma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          436

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                       US-09-938-391-1
